

Introduction to Computer Programming Using Java CIS 36A

Days: T-Th Time: 06:00 PM - 07:50 PM Room: L84

Faculty Information:

Dr. Kamran Eftekhari,

Phone: 408 832 4881

Email: eftekhariKamran@fhda.edu

Office hours: Thursday 4:30k 6:00pm

Office Location: ATC

Requisites: (Students may receive credit for either Computer Information Systems (36A and 36B) or 35A, but not both.)

Advisory: English Writing 211 and Reading 211 (or Language Arts 211), or English as a Second Language 272 and 273; Mathematics 114 or equivalent.

Hours: Four hours lecture, one and one-half hours laboratory (66 hours total per quarter).

Description: An introduction to computer programming. The primary objective is to teach problem solving using the Java programming language. Emphasis will be placed on structured procedural programming with an introduction to object-oriented programming. Designed primarily for computer science and related transfer majors.

Student Learning Outcome Statements (SLO)

- Design solutions for introductory level problems using appropriate design methodology incorporating elementary programming constructs.
- Create algorithms, code, document, debug, and test introductory level Java programs.
- Read, analyze and explain introductory level Java programs.

Course Objectives

- Illustrate the difference between procedural and object oriented programming.
- Describe steps in software development life-cycle design, development, styles, documentation, testing, and maintenance.
- Explain the Java Runtime Environment (JRE) and Java Software Development Kit (SDK).
- Illustrate declaring identifiers of different data types.
- Use data types to declare variables in Java programs.
- Apply input and output functions to read data using keyboard and output to screen.
- Use expressions, statements and operators to construct program building blocks that compute values.
- Apply control structures to break up flow of program execution and conditionally

Introduction to Computer Programming Using Java D036A-63Y

Days: T-Th Time: 06:00 PM - 07:50 PM Room: L84

execute blocks of code.

I. Illustrate usage of static methods to improve clarity, quality and development time of a computer program.

J. Develop programs using functions that enable input and output from text files.

K. Demonstrate usage of arrays to process variety of data problems.

Expanded Description: Content and Form

A. Illustrate the difference between procedural and object oriented programming.

1. Programming language overview.
2. Compare and contrast procedural versus object oriented programming languages.
3. Language generations – First to Fifth generations.
4. Compiled versus interpreted languages.

B. Describe steps in software development life-cycle design, development, styles, documentation, testing, and maintenance.

1. Flowcharts
2. Pseudocode
3. Software Development Life Cycle
4. Coding conventions
5. Documentation

C. Explain the Java Runtime Environment (JRE) and Java Software Development Kit (SDK).

1. import directive with java.lang package
2. Parts of a Java program
3. JRE program processing

D. Illustrate declaring identifiers of different data types.

1. Constants
2. Variables
3. Class names

E. Use data types to declare variables in Java programs.

1. Primitive types
 - a. Integer
 - b. Floating point
 - c. Boolean
 - d. Character
2. Classes
3. Declaring variables
4. Scope of variables
5. String and Date class

F. Apply input and output functions to read data using keyboard and output to screen.

Introduction to Computer Programming Using Java D036A-63Y

Days: T-Th Time: 06:00 PM - 07:50 PM Room: L84

1. Scanner
2. System.out.println and System.out.printf

G. Use expressions, statements and operators to construct program building blocks that compute values.

1. Arithmetic and Unary operators
2. Functions in java.lang.Math

H. Apply control structures to break up flow of program execution and conditionally execute blocks of code.

1. Relational Operators
2. Logical operators
3. The 'if' statement
4. Flags
5. Expanding the 'if' with 'else' and 'else if'
6. Comparing strings
7. The 'switch' statement
8. Loops
 - a. while loop
 - b. do while loop
 - c. for loop

I. Illustrate usage of static methods to improve clarity, quality and development time of a computer program.

1. Writing static methods definition.
2. Passing argument to parameters.
3. Pass by value.

J. Develop programs using functions that enable input and output from text files.

1. Output to a text file.
2. Input from a text file.

K. Demonstrate usage of arrays to process variety of data problems.

1. One-dimensional arrays
 - a. Accessing array elements.
 - b. Initialization
 - c. Processing array contents.
2. Sequential search
3. Selection sort

Grading System for this course

For Letter Grade:

Grade: A+ assigned with 97% or higher

Grade: A assigned with 93% or higher

Grade: A- assigned with 90% or higher

Introduction to Computer Programming Using Java D036A-63Y

Days: T-Th Time: 06:00 PM - 07:50 PM Room: L84

Grade: B+ assigned with 87% or higher
Grade: B assigned with 83% or higher
Grade: B- assigned with 80% or higher
Grade: C+ assigned with 77% or higher
Grade: C assigned with 73% or higher
Grade: D+ assigned with 70% or higher
Grade: D assigned with 63% or higher
Grade: D- assigned with 60% or higher
Grade: F assigned with 0% or higher
For Pass/No Pass:
Grade: Credit assigned with 70% or higher
Grade: No Credit assigned with 0% or higher
Incomplete
Audit
Withdrawal

Grading

Labs - 40% of the grade
Code Lab -10%
Midterm - 25% of the grade
Final - 25% of the grade

Exam Dates:

Midterm 2/15/2015 6:00 pm to 6:30 pm
Final 3/24/2015 6:30 pm to 8:30 pm

Methods of Evaluating Objectives

A. Evaluation of programming assignments for correctness, use of design principles, documentation, efficiency and teamwork.
B. One or more examinations requiring some programming, concepts clarification and exhibiting mastery of programming principles.
C. A final examination requiring concepts clarification and exhibiting mastery of programming principles.

Texts and Supporting References

Introduction to Java Programming, Comprehensive (10th Edition) [Paperback] - Y.
Daniel Liang (Author)
ISBN-10: 0132130807
ISBN-13: 978-0132130806

Attendance

You are responsible for completing all work assigned in this class in a timely fashion. You do not have to contact me with a reason of absence.
You should be enrolled in the class at De Anza College for getting course access and to attend the class.

Introduction to Computer Programming Using Java D036A-63Y

Days: T-Th Time: 06:00 PM - 07:50 PM Room: L84

Withdrawing

Once you are added to the class it is your responsibility to withdraw. I will not drop you from the class. The earned grade will be assigned at the end of the quarter.

Academic Dishonesty

You are encouraged to discuss the ideas presented in the class. Copying or Cheating of work will result in zero grade for that assignment and may result in a failing grade. Basically I cannot tolerate cheating. You must work your solutions independently and all assignments and tests should be your own original work
NO MAKEUP TESTS WILL BE GIVEN. You must pass the final to get a passing grade in this class.

Submitting Lab Assignments

All assignments must be submitted electronically using Catalyst. If you submit more than one file you must use Zip or RAR to archive them and submit.

Lab Grading Criteria

Full programming assignments will be evaluated with consideration given to Accuracy (does the program solve the computing problem)

Adherence to Object Oriented Programming Methodology techniques (for Assignment 2 onwards)

Code readability and appearance

Naming Conventions

Documentation

Timeline

Professional Presentation

Software

Download Java Standard Edition (latest version). Follow the installation instructions provided on the same page.

Mac users have java pre-installed and available in the Unix Shell on Mac OS. If you prefer a GUI based IDE then work with Eclipse.

Here is a video that might help - <http://www.youtube.com/watch?v=Otlva4ZHfqc>

Lab Topics

A. Debug code and output results of execution.

B. Write and/or debug code with input from keyboard and output to monitor.

C. Write and/or debug code implementing arithmetic expressions.

D. Write and/or debug code employing decision concepts and selections statements.

E. Write and/or debug code employing repetition concepts and for, while and do while loop structures.

F. Write and/or debug code implementing functions.

G. Write and/or debug code implementing file I/O.

H. Write and/or debug code implementing arrays.

I. Write and/or debug code implementing Objects and Classes.
